

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Team ID	SWTID-2026-1448
Project Name	Import Data using Transform Maps (Spreadsheet)

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Data Upload	Upload Excel/CSV spreadsheet Select the source file for import
FR-2	Import Set Creation and Validation	Load spreadsheet data into a ServiceNow Import Set table Validate required fields and identify missing or invalid values
FR-3	Transform Map Configuration	Map source spreadsheet columns to target table fields Run field transformations and import valid records
FR-4	Import Results and Error Review	View import status and transformation results Review failed records and error messages

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import process should be simple to understand, with clear labels and messages.
NFR-2	Security	Only authorized users should be able to upload data, configure mappings, and run imports.
NFR-3	Reliability	The system should preserve data accuracy and handle invalid records without stopping all valid records.
NFR-4	Performance	Spreadsheet data should be validated and transformed within a reasonable time for the expected file size.
NFR-5	Availability	The import feature should be available whenever the ServiceNow instance and required services are running.
NFR-6	Scalability	The solution should support larger spreadsheets and additional mapped fields as data needs increase.
