

PROJECT DESIGN PHASE

PROPOSED SOLUTION

Team ID	SWTID-2026-1448
Project Name	Import Data Using Transform Maps (Spreadsheet)

Proposed Solution

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Employee data received in spreadsheet format must be entered into ServiceNow. Manual entry and repeated imports can take time and may create duplicate records or inconsistent employee information.
2	Idea / Solution description	Use ServiceNow Import Sets and Transform Maps to load employee data from an Excel spreadsheet. Create an Employee Test custom table with Employee ID, Employee Name, Email, Department, and Location fields. Load the file into an Employee Import staging table, map source columns to target fields, and run the transformation. Configure Coalesce on Employee ID so matching records are updated while new IDs are inserted. Validate the result using transform history and the target table, then create department, location, and employee-list reports and add them to an Employee Analytics Dashboard.
3	Novelty / Uniqueness	The solution combines spreadsheet-based bulk loading, field mapping, and Employee ID-based coalescing in one repeatable workflow. It demonstrates insert, update, and duplicate-avoidance behavior and provides visual reporting through a dashboard.
4	Social Impact / Customer Satisfaction	The workflow can reduce repetitive data-entry effort for administrators or HR users, improve consistency of employee records, and make employee information easier to review through reports and a centralized dashboard.

S.No.	Parameter	Description
5	Business Model (Revenue Model)	This is an internal ServiceNow data-management workflow rather than a separately sold product. Its business value is operational: reducing manual processing effort, improving data quality, and supporting employee-data reporting.
6	Scalability of the Solution	The workflow can be reused for later spreadsheet imports by selecting the existing import table and transform map. Additional source columns or employee attributes can be supported by adding corresponding target fields and field mappings. Reports and dashboard views can also be extended as reporting needs grow.
