

PROJECT DESIGN PHASE

SOLUTION ARCHITECTURE

Team ID	SWTID-2026-1448
Project Name	Import Data Using Transform Maps (Spreadsheet)

Solution Architecture

The solution architecture describes how employee information from an Excel spreadsheet is loaded, mapped, transformed, stored, and presented in ServiceNow. The workflow uses an Import Set as a staging area and a Transform Map to map spreadsheet columns to fields in the Employee Test table. Coalesce on Employee ID identifies existing employees so that matching records are updated rather than duplicated. Reports and a dashboard provide a view of employee data.

The main goals of this solution are to:

- Import structured employee data from an Excel spreadsheet into ServiceNow.
- Create a custom Employee Test table with Employee ID, Employee Name, Email, Department, and Location fields.
- Map source columns to target fields and run the transformation.
- Use Employee ID as the coalesce field to update existing records and avoid duplicate inserts.
- Validate inserted, updated, and ignored records through transform history and the target table.
- Present employee information using department, location, and employee-list reports on a dashboard.

Solution Architecture Diagram

Architecture Components

Component	Purpose
Excel Spreadsheet	Provides employee records as the source file.
Import Set Table	Temporarily stages the uploaded spreadsheet data.
Transform Map	Defines source-to-target field mappings and performs transformation.
Employee Test Table	Stores the resulting employee records.
Coalesce on Employee ID	Matches existing employees for updates and prevents duplicate records during repeated imports.
Reports and Dashboard	Displays department distribution, location distribution, and employee records.

Expected Outcome

Employee spreadsheet data is imported into the Employee Test table. New Employee IDs are inserted, matching IDs are updated when source values change, and repeated unchanged rows are ignored according to the project workflow. The reports are added to the Employee Analytics Dashboard for centralized viewing.
