

ServiceNow Project Documentation

1. Introduction

- Project Title: Import Data Using Transform Maps in ServiceNow
- Team Members:
 - Kalaiveni K
 - Thanuja P
 - Anitha C
 - Harini S

Project Overview :

- Purpose: The project imports structured employee data from an external spreadsheet into ServiceNow using Import Sets and Transform Maps.
- Features: Import spreadsheet data, create an Import Set table, map source and target fields, transform records, prevent duplicates using Coalesce, and display information through Reports and Dashboards.

2. Architecture

- ServiceNow: The complete project is configured within the ServiceNow platform.
- Data Source: Excel/Google Spreadsheet containing employee information.
- Import Set: Employee Import (u_employee_import) acts as the staging area.
- Transform Map: Maps Employee ID, Employee Name, Email, Department and Location to the target table.
- Target Table: Employee Test (u_employee_test) stores the transformed employee records.
- Reporting Layer: Reports and Employee Analytics Dashboard provide centralized visibility.

3. Setup Instructions

- Prerequisites: ServiceNow instance, appropriate access, and an Excel/Google Spreadsheet containing structured employee data.
- Installation: Create Employee Test table and fields; create Employee Import table; load the spreadsheet using Load Data; create the Transform Map; configure field mappings; save and run the transformation; configure Coalesce on Employee ID.

4. Folder Structure

- ServiceNow Project: The project is configured inside ServiceNow rather than using a MERN client/server folder structure.
- Data Source: Employee spreadsheet.
- Import Set: Employee Import.
- Target Table: Employee Test.
- Transform Map: Sample Spreadsheet Import.
- Reports: Employees by Department, Employees by Location and Employee List Report.
- Dashboard: Employee Analytics Dashboard.

5. Running the Application

- Open the ServiceNow instance and navigate to Load Data.
- Select the Excel file and load it into Employee Import.
- Open the Transform Map and run Transform.
- Verify the transformation status and records in Employee Test.
- Open Reports and the Employee Analytics Dashboard to view the results.

6. API Documentation

- The project does not expose a custom REST API. The core workflow uses native ServiceNow Import Set and Transform Map functionality.
- Document any ServiceNow API endpoints only if they are added to the implementation.

7. Authentication

- Users require valid ServiceNow credentials and appropriate roles or permissions to access the required tables, Import Sets, Transform Maps, Reports and Dashboards.
- Administrative permissions may be required for certain configuration operations.

8. User Interface

- Provide screenshots showcasing the Employee Test table, Load Data screen, Transform Map and field mappings, Transform History, Reports and Employee Analytics Dashboard.

9. Testing

- Test spreadsheet upload into the Import Set.
- Test source-to-target field mapping.
- Test successful transformation and record creation.
- Test Coalesce using an existing Employee ID with changed values.
- Test repeated imports to confirm duplicate prevention.
- Test Reports and Dashboard output.

10. Screenshots or Demo

The screenshot displays the ServiceNow configuration interface for a table named 'Employee Test'. The page is titled 'Table - Employee Test' and includes a search bar and navigation tabs for 'Columns', 'Controls', and 'Application Access'. The 'Columns' tab is selected, showing a list of columns with their respective properties. The columns are as follows:

Column label	Type	Reference	Max length	Default value	Display
Email	String	(empty)	40		false
Updated by	String	(empty)	40		false
Updates	Integer	(empty)	40		false
Employee ID	String	(empty)	40		false
Updated	Date/Time	(empty)	40		false
Location	String	(empty)	40		false
Sys ID	Sys ID (GUID)	(empty)	32		false
Department	String	(empty)	40		false
Created by	String	(empty)	40		false
Employee Name	String	(empty)	40		false
Created	Date/Time	(empty)	40		false

Below the column list, there are buttons for 'Delete', 'Update', and 'Delete All Records'. A 'Related Links' section provides quick access to various tools and features, including 'Form Builder', 'Design Form', 'Layout Form', 'Layout List', 'Show Form', 'Show List', 'Show Schema Map', 'Add to Service Catalog', 'Run Print Scan', and 'Explore REST API'. At the bottom, there are tabs for 'Access Controls (4)', 'Security Data Filters', 'Labels (1)', 'Database Indexes (1)', and 'Table Subscription Configuration (1)'. A search bar and a 'New' button are also present at the bottom right.

The screenshot shows the Databricks workspace interface. At the top, there's a navigation bar with the Databricks logo, a search bar, and user profile information. Below the navigation bar, the main content area displays the job progress. The job is in a 'Complete' state with a 'Success' completion code. A message indicates that 15 rows were processed, 15 were inserted, and there were no errors or updates. The 'Next steps...' section provides links for 'Import sets', 'Loaded data', 'Create transform map', and 'Import log'.

11. Known Issues

- Spreadsheet data must follow the expected column structure.
- Incorrect field mappings may cause inaccurate imported records.
- Required ServiceNow permissions are needed for configuration and dashboard operations.
- Large or inconsistent source files may require additional data validation.

12. Future Enhancements

- Schedule automatic spreadsheet imports.
- Add advanced data validation and error reporting.
- Add more employee analytics and import-performance metrics to the dashboard.
- Integrate additional external data sources.
- Implement more detailed role-based access controls.
